

<http://pdfmachine.com/genp/overview.html>

I used pdfMachine to sign this PDF with my QuoVadis certificate.

It's also time stamped using a QuoVadis time stamping server.

<http://www.quovadisglobal.com>

Note the certificate chains all the way up to a root certificate in the Adobe Approved Trust List (AATL) and should automatically validate in Adobe reader under default settings. (as long as you have adobe reader 9 with latest security updates)

<http://www.adobe.com/security/approved-trust-list.html>

The actual signing is done on a **Safenet iKey 4000** USB token.
